

Class Grade Calculator - User Stories

1. *As a college student, I want to know what assignments I need to do well on so that I will have a higher chance of getting a good grade in my class.*

Students could use the class grade calculator this way. The student could use the output from the class grade calculator to determine what areas they may need to improve in, or what assignments they need to do better on. This will give the student a higher chance of obtaining a grade they are happy with.

2. *As a highschool student, I want to know what my grades will be at the end of my high school education so that I can determine what colleges I could apply for.*

This is a second way that the grade calculator could be of use. The student could input all of their grades from their high school education courses and see what their final grade would be based off of the grades and weights entered. This will give the student a better understanding about what colleges they may be able to attend, due to their calculated final grade.

3. *As a college student, I want to know what my final grade will be at the end of the semester so that I can see if I will make the Dean's List.*

This is another way that the grade calculator could be of use. The student could input their grades for a class in the current semester, and see what their final grade will be for that semester. The student could use the calculated result to determine what classes they may have to spend more time on, or which classes affect their grade the most.
